Automatic Pallet Loader
Replacing the Picker Mate Tabs

1. OVERVIEW

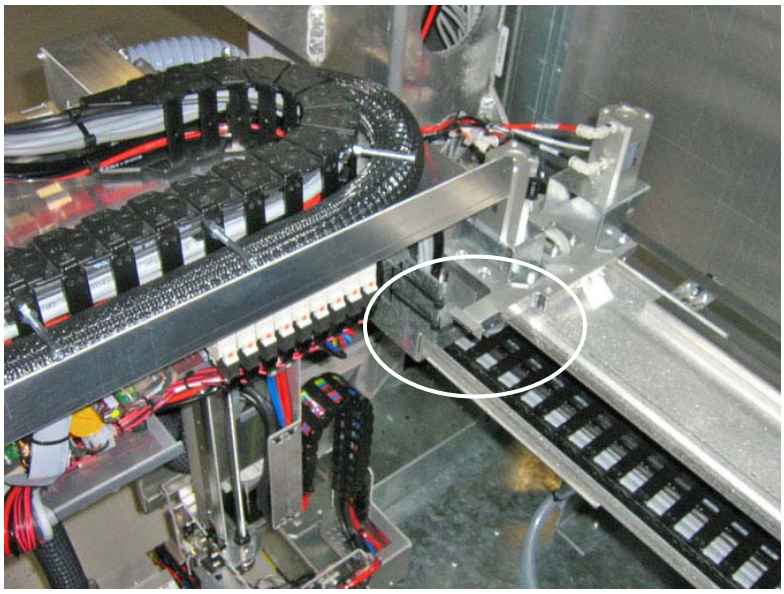

The picker mate tabs have been increased in length by 1.6 mm to reduce the risk of the picker and pusher colliding. Because the old tabs and the new tabs are visually almost identical, take care not to reinstall the old tabs after removing them.

2. PARTS/TOOLS

Kit: 512-00500A

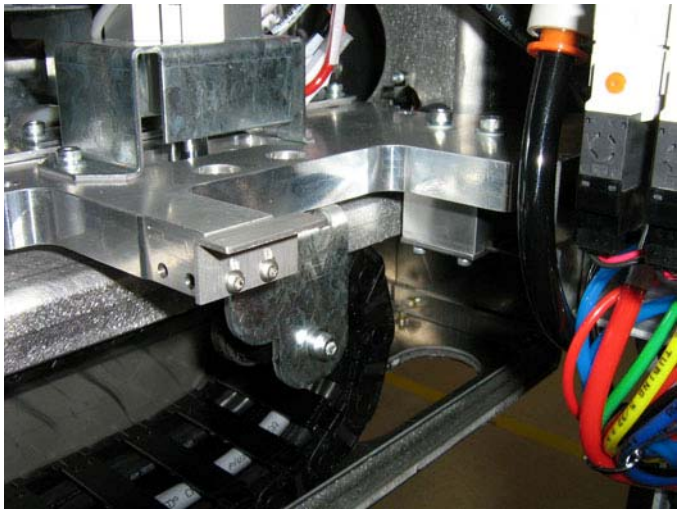

3. REPLACING THE MATE TABS

1. Locate the mate tabs on the picker.

2. Remove and discard the old tabs and screws.

3. Install the new longer tabs using new screws from the kit.

4. Using the obrounds in the tab, adjust the height of the tab so that it is vertically aligned with the centre of the mate sensor on the pusher.
