BBR RECOVERY CODE Release Notes:

RECOVERY v1.00 10-Mar-2000 LWIL

- First release of Boot Block Recovery Code. Use the file: MCEREC.BIN for
  MCE boards, and SATREC.BIN for Satellite I/O boards (all 68376 CPU based)
- You MUST use Bload.Exe v1.09 or newer to download the recovery code to the
  target board. (MCE, GENINE, or PDB). Use the following syntax:
  Bload f=satrec.bin i=rec p=1 b=57600 (for COM1 at 57600 baud, satellite board)
  Once the recovery code has successfully been downloaded, you can then use
  bload to download the boot code. use the following syntax:
  Bload f=xxxboot.bin i=boot p=2 b=57600 (for COM2 at 57600 baud)
  (where xxxboot.bin is either SATBOOT.BIN or MCEBOOT.BIN)
- This version of Recovery firmware was built using the following baseline
  components: Baseline Build #1512 built: Mar. 10, 2000.
  SAT: 1.22 17-Feb-2000 (only used by SATREC.BIN)
  MCE: 1.64 08-Mar-2000 (only used by MCEREC.BIN)
