Safe Service Practices

Productivity 2 Speed Increase

Productivity 2 improvements are part of the series 4 changes to Magnus VLF output devices. The changes are designed to increase the plate throughput of the device. To accomplish the increased throughput, the mechanical speed of many components has been increased by the use of faster cylinders, motors, and the supporting firmware. To avoid personal injury, field service engineers must keep this increase in speed in mind when working on series 4 devices.

Using the Safety Interlock Override Key Switch

Field service engineers are reminded that when the safety interlock override (SIO) key switch is in the **Interlock Override** position, mechanical movement is enabled in the device for temporary observation purposes. Additional care must be taken with the increased mechanical speed to ensure that your hands or other body parts are well away from any possible intended or unintended mechanical movement.

Also, remember to always use the proper lock out procedures for any hands-on adjustments or servicing. See the *Safety Policies For Field Engineers* document (761-00026A).

About Kodak Graphic Communications Group (GCG)

The leading provider of graphic communications solutions worldwide, Kodak's Graphic Communications Group (GCG) offers image capture systems; professional color, copydot, and high-speed document scanning systems; inkjet printing and proofing systems; workflow and color management software; thermal imaging devices for film, plates, and proofs; high-quality proofing media, printing plates, and recording film; on-demand color and black-and-white printing systems; data storage products; and professional services. With corporate headquarters located in Rochester, N.Y., Kodak (NYSE: EK) has the largest global sales force and is committed to a digitally oriented growth strategy.
