Kodak

TH3 Power Setting for Imaging Plates
Product Bulletin

Depending on the type of thermal plate being used, the thermal 3 head (TH3) may be required to operate at any power between 10 Watts and 45 Watts.

- Operating the thermal 3 head at 45 Watts does not compromise its reliability.
- The TH3 was designed to run at a maximum power specification of 45 Watts for the whole of its life, if required.

To maximize the life of the TH3,

- Follow a regular PM schedule
- Regularly clean the lens

For device and media specific speeds and exposure settings, see the CTP Imaging Database.
