New RIP Option

Brisque 5 includes a new RIP option: Pre-separated

By manually selecting the **Pre-separated** option, the input file maintains its composition until the end stage when the RIP splits the output job into the pre-separated format. This means that all options, including CT Resolve, can be activated.

The Pre-separated option solves some important RIP problems, such as:

- 64K colors
- Heavy copydot files (the file splits to pre-separated during RIP and improves the expose performance)
- Color overflow

FAF is not performed when using a RIP and FAF template, or if only these two operations are running. The RIP splits the output job into the pre-separated format first.
Note: Pre-separated will be the selected Separation Handling option even though Composite is displayed in the GUI.

About Creo

Creo is a world leader in solutions for the graphic arts industry. Core product lines include image capture systems; inkjet proofers; thermal imaging devices for films, plates and proofs; professional color and copydot scanning systems; and workflow management software. Creo is also an Original Equipment Manufacture supplier of on-press imaging technology, components for digital presses, and color servers for high-speed, print-on-demand digital printers.
