V5ready - Brisque

The v5ready program consists of two major consecutive operations:

- Validation of software and hardware prerequisites for user installation, and obtaining the required licenses for Brisque v5 and the new Helios Ethershare version
- Preparation and initiation of a fully automated loading of version 5.0 During the validation procedure, certain system checks may affect the progress of the installation performed. If any problems are detected, you will be informed and instructed on how to proceed.

v5ready - Installation Instructions

1. From your MAC, download/copy the v5ready.tar file into your Brisque dataVolumes (e.g. brisque1.1.0)
2. From the Brisque file manager, open the dataVolumes brisque1.1.0.
3. Locate the v5ready.tar, choose it and click on the mouse right button.
4. Choose Archive Unpack.
5. When the window opens select [enter], after a short process, a new file called v5ready will be added on the same location (e.g. brisque1.1.0).
6. Double-click the v5ready icon; the Action Run window is displayed.
7. On the Action Run window, click OK; the v5ready window is displayed.
8. Select Region and then the Language.
9. Follow the v5ready program instructions on the screen.
