Technical bulletin

Importing QuarkXPress 6.5 Files into Brisque

QuarkXPress® 6.5 files operate smoothly in Brisque® version 4.x and 5.0/5.1 and no problems were reported.

Known problem:

The only known problem is when spot gradients (vignettes) are printed in Composite mode using the **DeviceN** color space. The spot gradients are then not converted to PostScript® level 3 and they remain in the LW file instead of the CT file. This is a known problem in QuarkXPress since version 6.1.

Note: Spot vignettes from QuarkXPress 5 are recognized correctly and are created in the CT.

Workaround for this problem:

In QuarkXPress, print **Separations** instead of using **Composite mode**, and make sure to use the **Spot XT** to correct for spot emulation (in Preview and Proof) when printing. If you do not use the **Spot XT** then the spot colors created in QuarkXPress will appear as 100% in all CMYK separations.

About Creo

Creo is a world leader in solutions for the graphic arts industry. Core product lines include image capture systems; inkjet proofers; thermal imaging devices for films, plates, and proofs; professional color and copydot scanning systems; workflow management software; and proofing and printing consumables. Creo is also an original equipment manufacture supplier of on-press imaging technology, components for digital presses, and color servers for high-speed, print-on-demand digital printers. Creo trades under the symbols CREO on NASDAQ and CRE on the Toronto Stock Exchange. www.creo.com
