1. Open NetInfo Manager (located in Application-> Utilities).

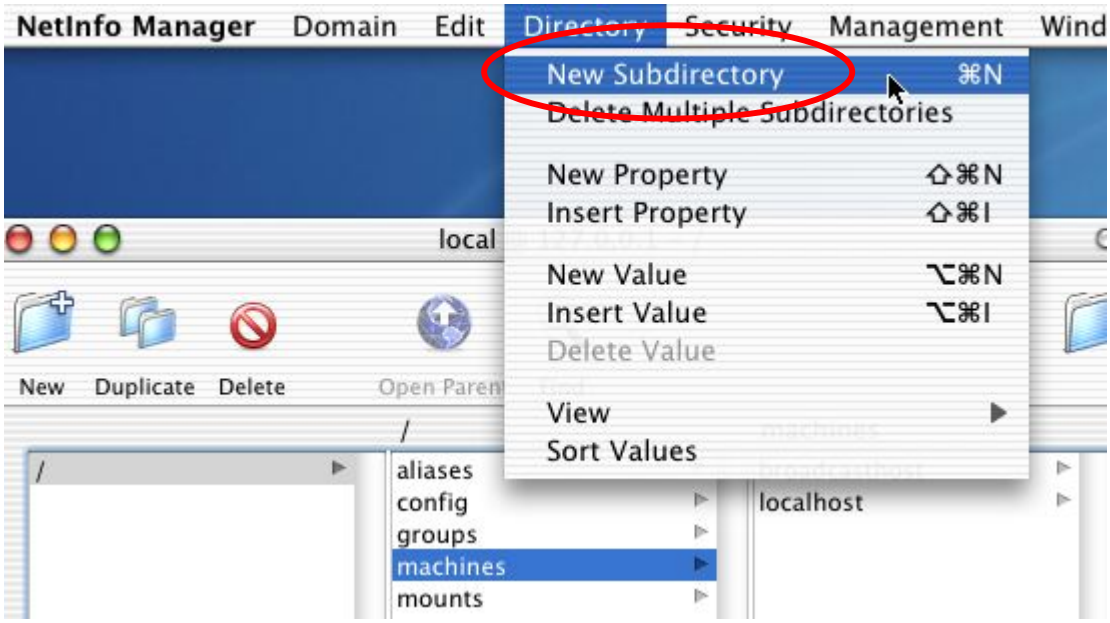

2. Click the lock in left bottom corner.

3. Fill the fields:

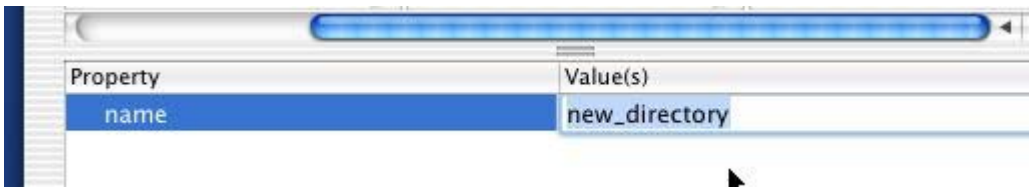

4. Choose “machines” from the second column.

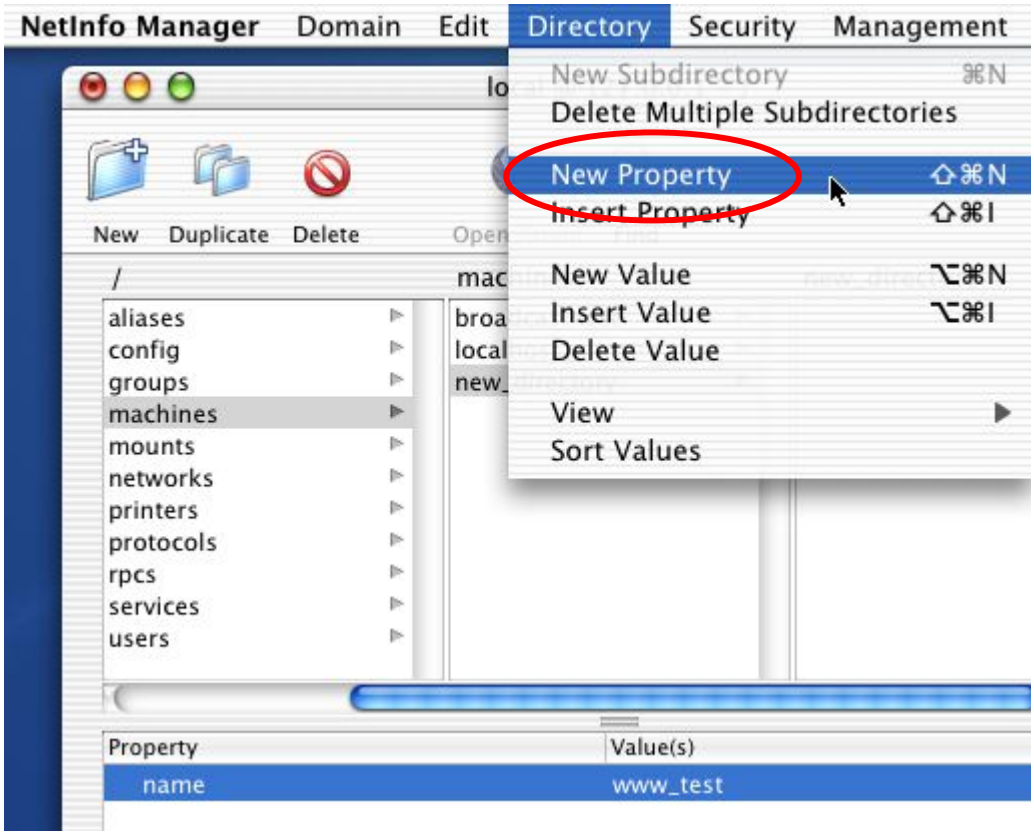

5. In application menu choose Directory -> New Subdirectory:

6. Type the host name in “Value” column:

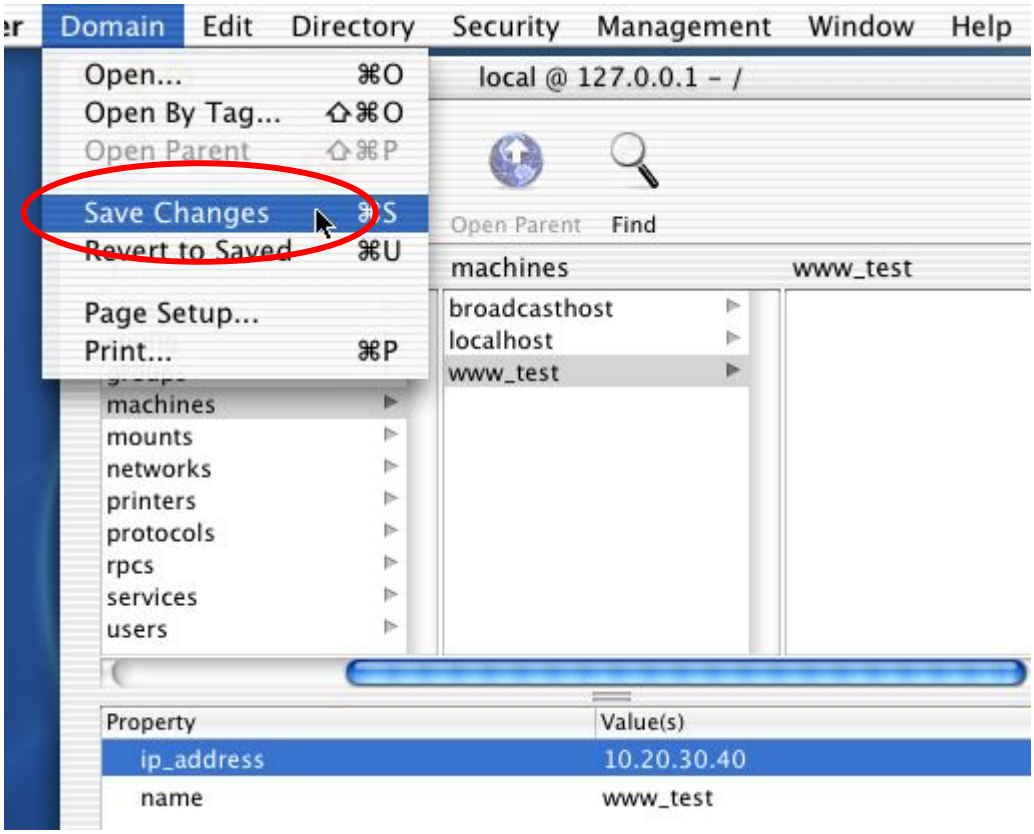

7. In application menu choose Directory -> New Property:

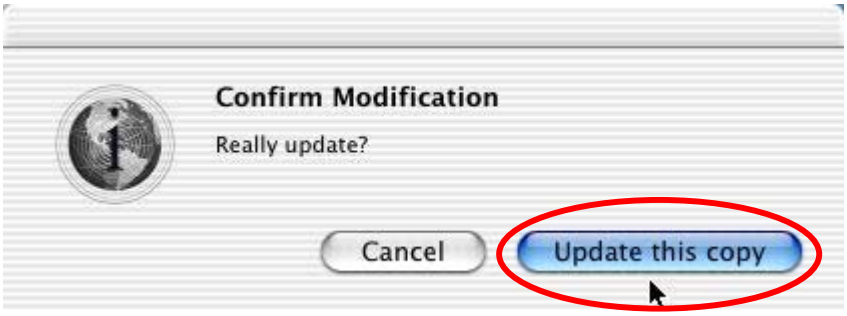

8. Change the name of property to “ip_address” (without the quotes) and type an IP address of the host in “Value” column.

9. To save the changes go to application menu Domain and select “Save Changes”:

10. Confirm the changes by pressing “Update this copy”:

11. Close the NetInfo Manager and check the connection in Explorer.

Good Luck!
