V51ready - Brisque

The v51ready program consists of two major consecutive operations:

- Validation of software and hardware prerequisites for user installation, and obtaining the required licenses for Brisque v5.1.
- Preparation and initiation of a fully automated loading of version 5.1. During the validation procedure, certain system checks may affect the progress of the installation performed. If any problems are detected, you will be informed and instructed on how to proceed.

v51ready - Installation Instructions

For Brisque V4.1

1. From your MAC, download/copy the v51ready.tar file into your Brisque dataVolumes (e.g. brisque1.1.0)
2. From the Brisque file manager, open the dataVolumes brisque1.1.0.
3. Locate the v51ready.tar, choose it and click on the mouse right button.
4. Choose Archive Unpack.
5. When the window opens select [enter], after a short process, a new file called v5ready will be added on the same location (e.g. brisque1.1.0).
6. Double-click the v5ready icon; the Action Run window is displayed.
7. On the Action Run window, click OK; the v5ready window is displayed.
8. Select Region and then the Language.
9. Follow the v5ready program instructions on the screen.

For Brisque V5.0

1. From your MAC, download/copy the v51ready.tar file into your Brisque dataVolumes (e.g. brisque1.1.0)
2. Open a terminal from Brisque:
   a. If you are in “Black Box” mode, click **Terminal**.
   b. If you are in Brisque application mode, click the **Service** tab, and then click **Terminal**.
   A terminal panel opens with the **>** prompt.
3. Type su and at the root password, type ripro.
4. Type cd /dataVolumes/brisque1.1.0 and press Enter
5. Type tar -xvf v51ready.tar and press Enter, after a short process, a new file called v51ready will be added on the same location (e.g. brisque1.1.0).
6. Type v51ready and press Enter
7. Select Region and then the Language.
8. Follow the v51ready program instructions on the screen.
