# PS/M 8.0 Updates

The **PS/M® 8.0** Updates should be installed on **PS/M 8 build 294** (FP version). You should download only the update that you need.

**The available updates are described below:**

**Hot Folder Printer permission problem (update 1)**
Sometimes files that are sent to Hot Folders from remote computers are assigned incorrect user names as the owner, and as a result these files don't enter the queue [21739]

**PDF2Go demo license (update 3)**

Since April 30th 2004, the Demo license does not work. Process fails immediately [21558]

**Combine + Hot Folder color table (update 4)**

- Combine—the icon of files created by the Combine process is incorrect [21740]
- PS/PDF through Hot Folder RIPs all2process regardless of the selected color table [21563]

**1-bit TIFF files exposed to Dolev (update 5)**

This update is intended for customers who expose 1-bit TIFF files to CTF.
The purpose of this update is to improve the expose time of 1-bit TIFF files to CTF.

**RIP process stops, when CT quality is selected (update 6)**

The RIP process stops when you select **CT Quality** in the RIP Preferences > CT Edges > LW Resolution. This problem occurs only with some PDF files.

**Font error corruption (update 7)**

Update 7 fixes the missing font problem that occurred when an Adobe® InDesign® file is RIPed.

**Error message when exposing 1-bit Creo file (update 8)**

Previously, when exposing a 1-bit Creo TIFF, an error message appeared requesting a non-Creo TIFF dongle.

**Installation instructions:**

1. Download **PSM8upd.dmg** to your Macintosh® (PS/M 8 build 294 should already be installed).
2. Double click **PSM8upd.dmg** to access **PSM8upd.pkg**.
3. Double click **PSM8upd.pkg**. The update is automatically installed following confirmation.

**How to verify that the update was installed correctly:**

Verify that **PSM8Upd** exists under /Library/Receipts.
